Textile  
Dispersant

## **Contraindications and situations to avoid**

Caution! This product is very different from Cetostearyl Alcohol (non-ethoxylated). Cetostearyl Alcohol 20 EO is a soluble product and not indicated for application in softeners and hair conditioners. For these applications, the most suitable product is Cetostearyl Alcohol (non ethoxylated).

## Physical-chemical specifications

### Parameters

### Specifications

Physical State, 25°C

Solid

Appearance

Opaque

Color

White

pH sol. 1%, aqueous, 25°C (w/w)

6,0 - 8,0

Melting Point (°C)

43 - 57

Total Acid Number (mg KOH/g)

Máx. 5,0

## Homologation

Contact our sales team and request a sample for testing and homologation!

# TrustScan®

All of our Standard products go through **TrustScan!**

A **methodology** that ensures the quality of the product at the time of application. We believe that a product with the **correct concentration** is the minimum we must provide.

**TrustScan** is more than an anti-fraud seal!

Due to the fact that it is one of the most traditional surfactants and has a low price, it is often adopted in cases where its performance does **not present** a cost-benefit ratio. After all, a low price does not always indicate a low cost in the application inside the formula.

To find out if you are using this product in the most cost-effective way and discover other solutions focused on **cost-benefit**, count on our Smart**Lab**!

**SmartLab** is a research and development department entirely dedicated to our active customers.

Live the **experience** of having a **strategic** partner at your service. Count on Smart**Lab**!

Contact our sales team. We will offer all our **know-how** to your product. If you have any questions, please contact our Smart**Lab**.
