Agricultural

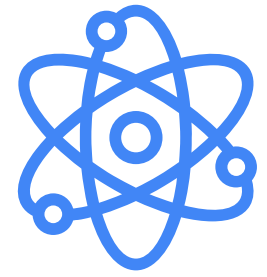

Solvent  
Dispersant

## **Contraindications and situations to avoid**

This product has a strong odor and modifies the perfume/odor of the formulas. Always perform an olfactory analysis to verify if the target audience will accept this new feature before launching the product. It may insolubilize in strongly alkaline media.

## Physical-chemical specifications

### Parameters

### Specifications

Physical State, 25°C

Liquid

Color

Colorless to yellowish

Purity (%)

Min. 99

Water (% w/w)

Max. 0,1

Total Acid Number (mg KOH/g)

Max. 0,047

## Homologation

# TrustScan®

All of our Standard products go through **TrustScan!**

A **methodology** that ensures the quality of the product at the time of application. We believe that a product with the **correct concentration** is the minimum we must provide.

**TrustScan** is more than an anti-fraud seal!

Due to the fact that it is one of the most traditional surfactants and has a low price, it is often adopted in cases where its performance does **not present** a cost-benefit ratio. After all, a low price does not always indicate a low cost in the application inside the formula.

To find out if you are using this product in the most cost-effective way and discover other solutions focused on **cost-benefit**, count on our Smart**Lab**!

**SmartLab** is a research and development department entirely dedicated to our active customers.

Live the **experience** of having a **strategic** partner at your service. Count on Smart**Lab**!

Contact our sales team. We will offer all our **know-how** to your product. If you have any questions, please contact our Smart**Lab**.

**Macler\***

Our chemistry  
in **harmony**  
with your routine.
